In the future, blue light blocking resin lenses will not only enhance the ability to filter harmful blue light and reduce damage to the eyes, but will also integrate more advanced material technology to improve the light transmittance and wear resistance of the lenses. In order to meet the needs of different users, blue light blocking resin lenses will also become more diversified, including professional products designed for specific age groups or occupations, and composite lenses with various additional functions such as color change and anti-reflection, aiming to provide users with all-round eye protection and a more comfortable visual experience.
