The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Boehmite for Lithium Battery Separators competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The purity of high purity boehmite is above 99.0%, like 99.0%, 99.5%, 99.7%, 99.8%, 99.95% and 99.99% etc. the high purity boehmite mainly used in Li-ion battery separator, electronic ceramics, flame-retardant filler and microcrystalline ceramics alumina etc. This report focuses on the Boehmite for Lithium Battery Separators, like Lithium-ion battery separators (LiBS) and electrode. Global key players of Boehmite for Lithium Battery Separators include Nabaltec, Anhui Estone Materials and CHALCO, etc. The top five players hold a share about 75%. China is the largest market, has a share about 78%. In terms of product type, For Separator Coating is the largest segment, occupied for a share of about 75%, and in terms of application, Power Batteries (EV) has a share about 92 percent. The global boehmite market for lithium battery separators is currently in a stage of rapid growth, driven by the booming demand for electric vehicles, energy storage systems, and portable electronics. Boehmite, an aluminum oxide hydroxide (γ -AlOOH), is widely used as a coating material for lithium battery separators due to its excellent thermal stability, high purity, and strong adhesion. Its application significantly enhances separator heat resistance and safety, preventing thermal runaway in high-energy-density batteries. At present, China dominates both production and consumption, with major manufacturers expanding capacity to meet surging demand. Looking ahead, the market will benefit from the global electrification trend, with boehmite-coated separators becoming a standard in high-performance lithium-ion and solid-state batteries. Key growth drivers include the accelerating adoption of electric vehicles, the expansion of renewable energy storage projects, and the growing demand for high-safety, high-energy-density batteries. Technological

improvements in separator coating processes and the shift toward ceramic-coated separators are further driving boehmite demand. However, the industry faces several challenges: limited availability of ultra-high-purity boehmite, high production costs, and stringent performance requirements from battery manufacturers. In addition, competition from alternative ceramic coating materials such as alumina and silica may restrain market penetration in certain segments. Ensuring consistent quality, scalability, and cost competitiveness remains a critical challenge for new entrants. Policy support plays a vital role in shaping the boehmite market. Governments in China, Europe, and the U.S. are promoting EV adoption, renewable energy deployment, and carbon neutrality targets, indirectly driving demand for advanced battery materials. Environmental regulations are also encouraging safer, more sustainable production processes in the ceramic and battery supply chains. At the same time, localization policies in China and Europe are accelerating domestic supply chain development to reduce reliance on imports. Overall, supported by strong policy incentives, technological advancements, and surging downstream demand, the boehmite for lithium battery separators industry is expected to maintain robust growth, with increasing opportunities for both global leaders and emerging local manufacturers.

The global Boehmite for Lithium Battery Separators market size was estimated at USD 161.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.40% during the forecast period.
