### Report Overview

Bonded leather is a type of leather alternative made from a combination of leather fibers and adhesives. It is created by combining the offcuts and scraps from genuine leather production with a binding agent, such as polyurethane or latex, to form a composite material. This process allows for the utilization of waste materials and results in a more affordable and versatile product compared to genuine leather. Bonded leather is known for its durability, ease of maintenance, and wide range of applications, including furniture upholstery, fashion accessories, and automotive interiors.
