Report Overview

Boron-free and fluorine-free glass fibers are mainly used as reinforced products. Because they do not contain fluoride and boride, they reduce the emission of particulate matter into the air, and also reduce the harm to people and equipment. At the same time, the production cost is lower than that of ordinary E glass, and the mechanical properties and chemical stability of the product are better than Ordinary E glass. Due to the requirements of large-scale production and raw material selection, the content of alkali metal oxides is currently limited to less than 0.8%. For enterprises, the range of optional raw materials is very narrow, which increases the difficulty of production and may limit the use of new glass fiber products. research and development.
