### Report Overview

The brazed aluminum radiator is a high-efficiency heat exchanger widely used in automotive, industrial, and HVAC applications due to its lightweight, corrosion resistance, and superior thermal conductivity. Constructed through a brazing process that joins aluminum components without additional filler materials, these radiators offer durability and compact designs ideal for modern cooling systems. The market is driven by rising demand for fuel-efficient vehicles, stringent emissions regulations, and the growing adoption of electric vehicles (EVs), where thermal management is critical. Industrial applications, including power generation and heavy machinery, further contribute to demand.
