Report Overview

Brominated flame retardants (BFRs) are a class of chemical compounds that contain bromine atoms and are primarily used to enhance the fire resistance of various materials. These compounds work by interrupting the chemical reactions that occur during combustion, thereby slowing down or preventing the spread of fire. BFRs are widely incorporated into a range of products, including electronics, textiles, furniture, and building materials, to reduce the risk of fire and the severity of its consequences. The effectiveness of brominated flame retardants is well-established; however, concerns have been raised about their environmental persistence and potential health impacts, leading to regulatory actions and the development of alternative flame retardant technologies.
