### Report Overview

Bromine Flame Retardants (BFRs) are a class of chemical compounds that contain bromine atoms and are primarily used to enhance the fire resistance of various materials. These compounds are incorporated into products such as plastics, textiles, and electronic devices to slow down or prevent the spread of flames. The bromine atoms within BFRs release bromine radicals when exposed to heat, which interfere with the chemical reactions that fuel combustion. This action effectively reduces the flammability of the material, thereby providing a protective barrier against fire. Bromine Flame Retardants are valued for their effectiveness in improving safety standards, but they have also been a subject of concern due to their potential environmental and health impacts, leading to a shift towards more eco-friendly alternatives in some applications.
