Report Overview

Building Solar Shading Materials are specialized construction materials designed to reduce the amount of solar heat gain in buildings. These materials are typically installed on the exterior or interior of windows, walls, or roofs to block or absorb sunlight, thereby reducing the need for air conditioning and lowering energy consumption. They can be made from various materials such as fabrics, films, or coatings and are often characterized by their ability to reflect or absorb solar radiation, control glare, and provide insulation. The effectiveness of these materials is measured by their Solar Heat Gain Coefficient (SHGC), which indicates the fraction of incident solar radiation that is absorbed and subsequently released indoors. Building Solar Shading Materials contribute to sustainable architecture by enhancing thermal comfort, reducing energy costs, and minimizing the environmental impact of buildings.
