### Report Overview

A Built-in Gastric Balloon, also known as an intragastric balloon, is a medical device designed to aid in weight loss by occupying space within the stomach, thereby reducing the patient's food intake and promoting a feeling of fullness. This non-surgical intervention involves the endoscopic placement of a deflated balloon into the stomach, which is then filled with a sterile saline solution or air to a specified volume. The balloon remains in the stomach for a set period, typically six months, after which it is removed endoscopically.
