Report Overview

Bus NVH (Noise, Vibration, and Harshness) Material refers to a range of specialized materials designed to mitigate and control the undesirable effects of noise, vibration, and harshness in bus vehicles. These materials are engineered to absorb, block, or dampen vibrations and sounds generated by the vehicle's engine, suspension, and other mechanical components. They play a crucial role in enhancing passenger comfort and reducing the overall noise pollution inside and outside the bus. Bus NVH materials can include acoustic foams, rubber bushings, vibration dampers, and soundproofing films or panels, which are strategically placed throughout the vehicle's interior and exterior to optimize noise reduction and vibration control. The selection and application of these materials are based on a thorough understanding of the bus's structural dynamics and the specific NVH characteristics that need to be addressed.
