### Report Overview

A Busbar-free (0BB) Stringer is an innovative solar photovoltaic (PV) module design that eliminates the traditional busbar structure, which is responsible for collecting and transferring electrical current from the solar cells to the module's output terminals. In a 0BB stringer, the electrical connections between solar cells are made directly without the need for busbars, which are typically made of copper or aluminum. This design aims to improve the efficiency of current collection, reduce shading losses, and potentially lower manufacturing costs. The 0BB stringer configuration can also lead to a more aesthetically pleasing appearance of the module, as it eliminates the visible busbar lines that are characteristic of conventional PV modules. This technology is part of ongoing efforts in the solar industry to enhance performance, reliability, and cost-effectiveness of solar energy systems.
