Report Overview

The By-pass Magnetic Level Gauge is a specialized industrial instrument designed to measure and monitor liquid levels in tanks, vessels, or boilers, particularly in high-pressure or high-temperature environments. It operates using a float with a magnetic system that moves with the liquid level, interacting with an external indicator to provide a visual or electronic reading without direct contact with the process fluid. This design ensures safety, accuracy, and durability in harsh conditions, making it suitable for industries such as oil & gas, petrochemicals, power generation, and water treatment. The gauge often includes features like corrosion-resistant materials, modular construction, and compatibility with automated control systems, enhancing its reliability in critical applications. Its bypass configuration allows for easy maintenance and calibration without disrupting the main process, further increasing its appeal in industries where operational continuity is essential.
