Report Overview

Cable and Wire locators are specialized electronic devices designed to detect and locate the presence, depth, and path of underground cables, wires, and pipes. These locators are essential tools for utility companies, construction workers, and electricians to safely and accurately identify the position of hidden cables and wires before digging or drilling. They typically operate by emitting a signal that induces a current in the target cable or wire, which then emits a magnetic field that the locator detects. This allows users to trace the path of the cable or wire without causing damage or interrupting service. Cable and Wire locators come in various types, including radio frequency (RF) locators, direct connection locators, and inductive locators, each with its own set of features and capabilities to suit different applications and environments.
