### Report Overview

Calcium Disodium Edetate, also known as calcium disodium versenate, is a chelating agent primarily used in medical applications. It is a synthetic compound with the chemical formula  $C_{10}H_{12}CaN_2Na_2O_8$ , consisting of a calcium salt of ethylene diamine tetraacetic acid (EDTA). This product is specifically utilized as an antidote for heavy metal poisoning, particularly in cases involving lead, mercury, and other toxic metal ions. It works by binding to these metal ions, forming stable, water-soluble complexes that can be safely excreted from the body through urine. Calcium Disodium Edetate is administered intravenously or intramuscularly, and its effectiveness is contingent upon the prompt initiation of treatment following exposure to heavy metals. It is crucial to note that this product is not a standalone treatment and should be used in conjunction with other supportive therapies as part of a comprehensive medical response to heavy metal poisoning.
