Report Overview

Calcium silicate building boards are prefabricated construction materials composed primarily of calcium silicate, reinforced with cellulose fibers and other additives to enhance durability, fire resistance, and moisture resistance. These boards are widely used in applications requiring high thermal stability, such as fireproofing, wall cladding, and ceiling systems, as well as in environments prone to humidity, including commercial kitchens, industrial facilities, and marine constructions. Their non-combustible nature, lightweight properties, and ease of installation make them a preferred alternative to traditional gypsum or cement boards in modern construction. The market for calcium silicate boards is driven by stringent building safety regulations, rising demand for sustainable materials, and increasing infrastructure development in both residential and commercial sectors.
