Report Overview

Calf Compression Socks are specially designed garments that provide graduated compression to the calf region of the lower leg. These socks are typically made from elastic materials such as spandex or nylon, which help to improve blood circulation, reduce swelling, and alleviate pain in the calf muscles. They are often used by athletes, individuals who stand or sit for long periods, and those suffering from conditions like varicose veins or lymphedema. The graduated compression means that the pressure is greatest at the ankle and decreases as it moves up the leg, which helps to promote blood flow back towards the heart. Calf Compression Socks come in various lengths, from just covering the calf to extending up to the knee, and are available in different compression levels to cater to individual needs and preferences.
