### Report Overview

The Calprotectin ELISA Test Kit is an in vitro diagnostic tool used to quantitatively measure calprotectin levels in human stool samples, primarily serving as a biomarker for gastrointestinal inflammation, particularly in conditions like inflammatory bowel disease (IBD), including Crohn's disease and ulcerative colitis. These kits utilize enzyme-linked immunosorbent assay (ELISA) technology, offering high sensitivity and specificity in detecting calprotectin, a protein released by neutrophils during inflammation. The test aids clinicians in differentiating between IBD and irritable bowel syndrome (IBS), monitoring disease activity, and assessing treatment efficacy. The market for these kits is driven by the rising prevalence of gastrointestinal disorders, increasing demand for non-invasive diagnostic methods, and advancements in ELISA-based technologies. Key end-users include hospitals, diagnostic laboratories, and research institutions, with manufacturers focusing on improving assay accuracy, reducing turnaround time, and expanding accessibility in both developed and emerging markets. Regulatory approvals, reimbursement policies, and competition from alternative biomarkers or point-of-care tests also influence market dynamics.
