Immunotherapy is a type of medical treatment that harnesses the body's own immune system to fight diseases, particularly cancer. Unlike traditional treatments such as chemotherapy and radiation therapy, which directly target cancer cells, immunotherapy stimulates the body's natural defenses to identify and destroy cancer cells more effectively. It is a type of personalized treatment. (Immunotherapy is often tailored to the patient's specific cancer and immune system. Biomarker testing is sometimes performed to determine the suitability of certain immunotherapy drugs.)
