Report Overview

A Canned Motor Sealless Pump is a type of centrifugal pump that utilizes a hermetically sealed, canned motor design to eliminate the need for mechanical seals. This design features a motor that is completely enclosed within a stainless steel canister, which is filled with a liquid that also serves as the pump's lubricant and coolant. The absence of external seals reduces the risk of leakage, making it an ideal choice for handling hazardous or aggressive fluids. The pump operates by converting electrical energy into mechanical energy through the interaction of the motor's rotor and stator, which in turn drives the pump's impeller to circulate the fluid. This type of pump is commonly used in industries where safety and environmental concerns are paramount, such as chemical processing, pharmaceuticals, and water treatment, due to its ability to prevent fluid leakage and maintain a high level of reliability.
