Report Overview

Capacitive Cold-cathode Ionization Compound Pressure Gauges are advanced pressure measurement devices that utilize a combination of capacitive and cold-cathode ionization technologies. These gauges are designed to accurately measure pressure in various environments, including vacuum and low-pressure conditions. The capacitive technology allows for precise detection of pressure changes by monitoring the capacitance between two conductive plates, while the cold-cathode ionization component enhances sensitivity and response time by ionizing gas molecules within the measurement chamber. This dual-technology approach enables the gauges to provide reliable, real-time pressure data across a wide range of applications, such as in scientific research, industrial processes, and aerospace engineering.
