### Report Overview

A capacitive level limit switch is a device used to detect liquid levels or liquid interfaces. It usually consists of two electrodes, one is the sensing electrode and the other is the ground electrode, and the capacitance between them changes with the liquid level. When the liquid level approaches or touches the sensing electrode, the capacitance value will change, which triggers the switch action to control the liquid level. This kind of switch is widely used in industrial automation, water treatment, chemical industry, food processing and other fields.
