Abstracts

Capsule suspensions (CS) are still one of the most advanced formulation types in global crop protection products and are a typical new generation formulation. When microencapsulated suspension (CS) is diluted with water in a spray tank, it will spontaneously disperse to form a suspension with a particle size range of 0.1 to 20 μ m. When sprayed, the diluted suspension can apply the active ingredients evenly and accurately to the crop, which is crucial for effective pest control. Microencapsulated suspensions (CS) can be used to achieve controlled and sustained release of active ingredients, while also reducing the toxicity and degradation of active ingredients.

The global Capsule Suspension Cs Preparation market size was estimated at USD 850.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
