Report Overview

Car Cooled Seats, also known as ventilated or climate-controlled seats, are a feature in modern automobiles designed to enhance passenger comfort, particularly during hot weather conditions. These seats are equipped with a system that circulates air through the seat cushion and backrest, effectively cooling the surface and reducing the temperature of the seat. The cooling effect is achieved through the use of small fans or blowers integrated into the seat structure, which draw air from the vehicle's cabin or from an external source and distribute it across the seat's surface. This feature is particularly beneficial for long drives or in regions with high ambient temperatures, as it can help to prevent discomfort from heat buildup and sweating, thereby providing a more pleasant and refreshing driving experience.
