### Report Overview

The car dry ice blasting machine is an advanced cleaning system that utilizes compressed air to propel dry ice pellets (solid CO<sub>2</sub>) at high velocities, effectively removing contaminants like paint, grease, dirt, and residue from automotive surfaces without abrasion, water, or chemicals. The process relies on the kinetic energy of the pellets and the thermal shock effect, where the extreme cold (-78.5°C) causes contaminants to contract and detach from the substrate, while sublimation leaves no secondary waste. This method is particularly valuable in automotive restoration, detailing, and industrial cleaning due to its non-destructive, eco-friendly nature, eliminating the need for disassembly or post-cleaning treatment. The technology is favored for its precision, efficiency, and compliance with environmental regulations, making it a preferred alternative to traditional sandblasting or solvent-based cleaning in sectors prioritizing sustainability and surface integrity.
