Report Overview

A Carbon-14 Radioactive Source is a specialized radioactive material used in various scientific and industrial applications. It is derived from the radioactive isotope of carbon known as Carbon-14, which is naturally occurring and decays over time through beta decay. This source is characterized by its half-life of approximately 5,730 years, making it suitable for dating organic materials up to about 50,000 years old using radiocarbon dating techniques. In addition to its use in archaeology and geology, Carbon-14 sources are utilized in medical applications such as cancer treatment, in industrial processes like tracer studies, and in the calibration of other radiation detection equipment. The handling and use of Carbon-14 sources are strictly regulated due to their radioactivity, and they require proper safety measures and disposal protocols to minimize health and environmental risks.
