## Abstracts

Carbon Capture and Utilisation (CCU) is a diverse set of technologies that allow for the capture and use of carbon as a feedstock for making essential products such as fuels, chemicals and building materials that today are predominantly derived from fossil resources. Such technologies are at different stages of development and some are already commercially available. CCS (Carbon Capture and Storage) is a technology designed to reduce carbon dioxide (CO<sub>2</sub>) emissions by capturing CO<sub>2</sub> from industrial processes and power plants and piping it to a storage site to be permanently sequestered, thereby preventing it from entering the atmosphere. Whether it is CCS or CCU, the captured CO<sub>2</sub> needs to be compressed for transportation and subsequent processing, so CCS, CCU together form CCUS, an integrated technology that reduces greenhouse gas emissions and mitigates the impacts of climate change by capturing carbon dioxide (CO<sub>2</sub>) generated from industrial and energy production processes and utilizing it or sequestering it. The CCUS technology is not only capable of capture and store CO<sub>2</sub>, but also be able to convert it into valuable products, thus realizing both environmental and economic benefits.

The global Carbon Capture And Utilisation Solutions market size was estimated at USD 15500.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 22.50% during the forecast period.
