### Report Overview

A Carbon Capture, Usage, and Storage (CCUS) System is an integrated technological framework designed to mitigate the environmental impact of greenhouse gas emissions, primarily carbon dioxide (CO<sub>2</sub>). It encompasses three main processes: capture, where CO<sub>2</sub> is separated from industrial and energy-related sources before it is released into the atmosphere; usage, which involves the conversion of captured CO<sub>2</sub> into valuable products or resources, such as fuels, chemicals, or construction materials; and storage, where the CO<sub>2</sub> is securely stored to prevent its release back into the atmosphere, typically in geological formations like depleted oil and gas reservoirs or deep saline aquifers. The CCUS system plays a crucial role in reducing global carbon emissions and supporting the transition to a low-carbon economy by providing a means to manage and repurpose carbon emissions from various industries.

In 2024, the global Carbon Capture Usage and Storage (CCUS) System market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
