Abstracts

The orthopedic traction frame is mainly used for various orthopedic surgeries such as traction, reduction, and fixation of the lower limbs. During the operation, the patient's limbs can be in lateral and horizontal traction, as well as inward and outward abduction postures. The use of the orthopedic traction frame during the operation allows the patient to easily achieve a good reduction effect by adjusting the traction device under the C-arm fluoroscopy, and it is not easy to change the posture, which obviously helps the operation.
