## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Carbon Fiber Reinforced Polyamide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Carbon fiber reinforced polyamide is an advanced composite material made by adding carbon fiber as a reinforcing agent to polyamide (nylon) plastic. It combines the excellent processability and chemical resistance of polyamide with the high strength, high rigidity and low density of carbon fiber, thus achieving superior mechanical properties compared to pure polyamide or traditional metal materials. Global sales in 2024 were approximately 300,000 tons, with an average market price of approximately \$3,000 per ton. The scale of single-line production capacity varies depending on the production process and investment scale. The industry gross profit margin ranges from 15% to 35%.">The upstream mainly includes polyamide (polymer matrix) and carbon fiber (reinforcing material). Polyamide production relies on chemical raw materials, while carbon fiber production starts from precursors such as polyacrylonitrile (PAN) or pitch. These constitute the upstream industrial chain of this composite material. Due to its "lightweight and high-strength" characteristics, downstream applications are mainly in the automotive, aerospace, and industrial sectors. Global sales in 2024 were approximately 300,000 tons, with an average market price of approximately \$3,000 per ton. The scale of single-line production capacity varies depending on the production process and investment scale. The industry gross profit margin ranges from 15% to 35%. When carbon fiber is incorporated into PA6/PA66 systems, tensile strength and modulus can typically increase by 50-60% or more, while significantly reducing linear expansion and creep, allowing the material to maintain stiffness and dimensional stability under high temperatures and high loads. With the popularization of new energy vehicles, weight reduction to improve driving range has

become a key issue. Carbon fiber reinforced polyamide is one of the preferred materials for achieving lightweighting in automobiles. It not only reduces weight but also improves the strength and durability of components, directly driving market demand. Furthermore, due to its high specific strength, high specific modulus, and excellent fatigue resistance, it is widely used in aircraft structural components, engine parts, and other applications.

The global Carbon Fiber Reinforced Polyamide market size was estimated at USD 1022.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
