Report Overview

Carbon Reinforced Carbon (CRC) is a composite material that consists of carbon fibers embedded within a matrix of carbon material. This advanced material is known for its exceptional strength, high temperature resistance, and lightweight properties. CRC is typically produced by infiltrating a porous carbon fiber preform with a liquid carbon precursor, which is then pyrolyzed to form a dense, strong, and durable structure. The resulting material exhibits superior mechanical properties, such as high tensile strength and modulus, along with excellent thermal stability and chemical resistance. These characteristics make Carbon Reinforced Carbon an ideal material for applications in aerospace, automotive, and industrial sectors where high-performance materials are required to withstand extreme conditions.
