Abstracts

The carbon-supported precious metal catalyst is a supported catalyst that uses carbon as a carrier and adsorbs noble metal active components on the surface of the carbon carrier. Because carbon has a large surface area, good pore structure, rich surface groups, and has good loading performance and reducibility, carbon-supported precious metal catalysts overcome the shortcomings of traditional precious metal catalysts such as difficulty in separation and easy agglomeration. The carrier makes the catalyst have a higher degree of dispersion, which greatly improves the activity and stability of the catalyst and reduces the amount of precious metals.

The global Carbon Supported Precious Metal Catalyst market size was estimated at USD 812.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Carbon Supported Precious Metal Catalyst market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
