Report Overview

Castor Oil Ethoxylates (COE) are a class of nonionic surfactants derived from the ethoxylation of castor oil. Castor oil, obtained from the seeds of the *Ricinus communis* plant, is a naturally occurring triglyceride that contains a high percentage of ricinoleic acid. When castor oil undergoes ethoxylation, which is a chemical process where ethylene oxide is added to the oil, it results in the formation of COE. These ethoxylated derivatives exhibit unique properties such as excellent solubility, emulsifying capabilities, and compatibility with a wide range of substances. COE are widely used in various industries, including cosmetics, pharmaceuticals, and lubricants, due to their ability to improve the stability and performance of formulations. They are also known for their low toxicity and biodegradability, making them an environmentally friendly choice for many applications.
