Report Overview

Category 5 Ethernet Cables, often abbreviated as Cat 5 cables, are a type of twisted pair cabling used primarily for Ethernet and other network connections. These cables are designed to support high-speed data transfer rates and are capable of handling bandwidths of up to 100 MHz. They consist of four twisted pairs of copper wire, each pair being color-coded for easy identification. Cat 5 cables are terminated with RJ-45 connectors on both ends, which are used to connect devices such as computers, routers, and switches. These cables are known for their reliability and are widely used in both residential and commercial settings for networking purposes. They were introduced to replace the earlier Category 3 cables and have since been succeeded by higher categories like Cat 5e, Cat 6, and beyond, which offer improved performance and support for even faster data transfer rates.
