### Report Overview

CBZ-amino acids are a type of amino acids protected by benzyloxycarbonyl (CBZ) amino protecting group. CBZ is an old amino protecting group discovered by Bergmann in 1932, but it is still used today. The advantages are that the preparation of reagents and the introduction of protective groups are relatively easy and N-benzyloxycarbonyl amino acids and peptides are easy to crystallize and are relatively stable. In addition, CBZ-amino acids are not easy to racemize when activated as well as they can be selectively removed by a variety of mild methods. For the introduction of benzyloxycarbonyl, CBZ-Cl is generally used. The free amino groups can be easily reacted with CBZ-Cl under alkaline conditions controlled by NaOH or NaHCO<sub>3</sub> to obtain N-benzyloxycarbonyl-amino acids.

This report provides a deep insight into the global CBZ-Amino Acids market covering all its essential aspects.
