### Report Overview

Cefotetan Disodium API is a second-generation cephalosporin antibiotic used primarily in the treatment of bacterial infections, including those caused by gram-negative and gram-positive organisms. It functions as a beta-lactam antibiotic by inhibiting bacterial cell wall synthesis, making it effective against a broad spectrum of infections, including intra-abdominal, urinary tract, and gynecological infections. The API is typically formulated into injectable dosage forms for hospital and clinical use, often administered intravenously or intramuscularly. Its stability and efficacy against beta-lactamase-producing bacteria contribute to its demand in both developed and emerging healthcare markets. Regulatory compliance, stringent manufacturing standards, and the growing prevalence of antibiotic-resistant infections are key factors influencing its production and market dynamics.
