Report Overview

A ceiling air cooler is a cooling device that is mounted on the ceiling of a room or space. Unlike traditional air conditioners, which require installation on or windows, ceiling air coolers are designed to be integrated into the building's ventilation system. Ceiling air coolers work by drawing in warm air from the outside and passing it over a series of wet pads. As the warm air passes through the wet pads, the water evaporates, which cools the air. The cooled air is then distributed throughout the or space by the ventilation system. Ceiling air coolers are commonly used in commercial or industrial settings, such as warehouses, factories, and large retail spaces. They are an energy-efficient and cost-effective alternative to traditional air conditioning systems, particularly in areas with low humidity.
