Abstracts

Ceiling-mounted radiation shielding curtains are specialized curtains that can be installed in radiation rooms to provide extra protection from radiation exposure. These curtains are made of heavy-duty materials that contain lead or other metals that block ionizing radiation particles. They can be suspended from the ceiling and moved to adjust the extent of coverage as needed. Ceiling-mounted radiation shielding curtains are commonly used in medical facilities and research laboratories where diagnostic and therapeutic procedures expose personnel to ionizing radiation. They help to contain radiation within a specific area, reducing the risk of exposure to those working nearby.

The global Ceiling Mounted Radiation Shielding Curtain market size was estimated at USD 45.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
