Report Overview

A Ceiling Mounted X-ray System is a medical imaging equipment designed to capture diagnostic images of a patient's internal structures, particularly the skeletal system. This system is mounted on the ceiling, allowing for easy maneuverability and positioning over the patient without the need for floor-based support structures. It typically consists of an X-ray tube, a detector, and a control console. The X-ray tube generates the radiation that passes through the patient's body, while the detector captures the transmitted radiation to create an image. The control console enables the operator to adjust settings such as exposure time and radiation intensity. This system is often used in hospitals and diagnostic centers for various examinations, including orthopedic, trauma, and surgical assessments. It offers benefits such as reduced space requirements, increased patient comfort due to the absence of large, floor-standing equipment, and improved workflow efficiency in radiology departments.
