Abstracts

A Cell Contact System (CCS) is an integral component of battery management systems, specifically designed for electric vehicles and energy storage applications. It ensures reliable electrical connections between battery cells and the monitoring or control electronics. The CCS typically includes connectors, sensors, and circuitry that manage and monitor the voltage, temperature, and state of charge of individual cells. By facilitating accurate data collection and efficient power distribution, the CCS plays a crucial role in maintaining the performance, safety, and longevity of battery packs. This system is essential for optimizing battery efficiency, preventing overcharging or deep discharging, and ensuring the overall reliability of the energy storage system. The development of new energy sources is fueling growth, with the global market expected to exceed 27 billion yuan by 2028. The CCS, made by combining aluminum bars, signal acquisition components, insulating materials, and more through hot pressing or riveting, offers advantages like lightweight structure and high integration, enhancing the efficiency and space utilization in battery. Innovations in battery structure and cost reduction are driving continuous technological advancements, optimizing industry structure as a result. Different technical solutions for CCS involve varying materials, processes, and equipment. As technology evolves, so do competitive barriers, which is expected to further streamline industry dynamics. We expect manufacturers with capabilities in equipment self-manufacturing and core component integration to gain market share and maintain stable profit margins. In the short term, companies closely aligned with core battery customers are well-positioned, but in the medium and long term, success will hinge on channel expansion, R&D, and cost control capabilities. The evolution of integrated busbar technology is reshaping competitive barriers, and manufacturers with strong new product development and cost control capabilities are likely to see sustained growth in market share.

The global Cell Contact System (CCS) market size was estimated at USD 1550.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 24.00% during the forecast period.
