## Abstracts

Cell and Gene Therapy Contract Development and Manufacturing Organization (CDMO) services involve companies providing specialized expertise and infrastructure for the development, manufacturing, and commercialization of cell and gene therapy products on behalf of biopharmaceutical companies. These services encompass a range of activities, including process development, analytical testing, regulatory support, and manufacturing at various scales, from preclinical to commercial production. CDMOs play a critical role in accelerating the translation of cell and gene therapies from research to clinical application by offering tailored solutions to meet the unique requirements of each therapy, ultimately helping to bring innovative treatments to patients more efficiently and effectively. Due to complex technical mechanisms, high-threshold process development and large-scale production, strict regulatory requirements, and limited industrialization experience, CGT products are more dependent on CDMOs than traditional pharmaceuticals. Its outsourcing penetration rate exceeds 65%, far exceeding 35% of traditional biologics. Considering that the production of viral vectors as the core involves very complex processes, is extremely difficult, and has a long preparation cycle, it is expected that the outsourcing rate of CGT will remain high in the future.

The global Cell and Gene Therapy CDMO Services market size was estimated at USD 7715.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 32.90% during the forecast period.
