Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cellular Vehicle-to-Everything (C-V2X) Communication Devices competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Cellular Vehicle-to-Everything (C-V2X) communication equipment refers to hardware modules that enable low-latency, high-reliability communication between vehicles and other vehicles (V2V), infrastructure (V2I), pedestrians (V2P), and cloud platforms (V2N) based on cellular networks (4G LTE, 5G). This equipment is typically integrated into onboard units (OBU), roadside units (RSU), or embedded gateways, and possesses communication, positioning, edge computing, and security encryption functions. It solves problems such as slow response times, information silos, and limited perception range in traditional transportation systems, and is a core support for intelligent transportation and cooperative driving. The product is priced at approximately \$800 per unit, with global sales of about 1.8 million units. Gross profit margin is approximately 30%-55%, with high-end products achieving margins exceeding 60%. The upstream of the C-V2X communication equipment industry chain mainly relies on high-performance communication chips (such as 5G NR, C-V2X), GNSS positioning modules, multi-mode antennas, industrial-grade motherboards, and embedded operating systems (such as Linux, QNX) to build the hardware foundation with high-speed communication and edge computing capabilities. Downstream applications are widely used by automotive OEMs, traffic management bureaus, smart city platforms, fleet operators, and autonomous driving companies, supporting the deployment of intelligent transportation, cooperative driving, and city-level traffic management systems. Future development trends will focus on integration with autonomous driving domain controllers to create an integrated "communication +

computing" platform; enhancing system redundancy and coverage through multi-mode communication (5G, satellite, Wi-Fi); integrating AI acceleration modules to achieve edge intelligent analysis; and enhancing system maintainability and security through OTA remote upgrades and encryption technology, thereby driving the evolution of vehicle-to-everything (V2X) towards intelligence and high reliability.

The global Cellular Vehicle-to-Everything (C-V2X) Communication Devices market size was estimated at USD 1442.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.00% during the forecast period.
