### Report Overview

Cellulose acetate gauze is a specialized medical dressing made from cellulose acetate fibers, a semi-synthetic material derived from wood pulp or cotton linters, chemically treated to enhance absorbency, softness, and biocompatibility. It is widely used in wound care for its non-adherent properties, allowing it to protect healing tissue while absorbing exudate without sticking to the wound bed, reducing trauma during dressing changes. The material is lightweight, breathable, and often combined with other antimicrobial agents to prevent infection. Its applications range from post-surgical dressings to burns, ulcers, and minor abrasions, making it a staple in hospitals, clinics, and first-aid settings. The market for cellulose acetate gauze is driven by increasing surgical volumes, rising chronic wound cases (e.g., diabetic ulcers), and growing demand for advanced wound care products that promote faster healing with minimal discomfort.
