### Report Overview

Cellulose-based packaging refers to a type of eco-friendly packaging material derived from cellulose, a complex carbohydrate found in the cell walls of plants. This sustainable and biodegradable packaging option is made from renewable resources such as wood pulp, cotton, or hemp, and is processed to create a variety of packaging forms, including molded fiber packaging, paper-based packaging, and cellulose nanocrystal (CNC) films. The primary advantage of cellulose-based packaging is its minimal environmental impact, as it decomposes naturally and does not contribute to plastic pollution. Additionally, it offers excellent barrier properties against moisture, gases, and light, making it suitable for various applications, including food and beverage, pharmaceuticals, and consumer goods. The use of cellulose-based packaging aligns with global efforts to reduce waste and promote a circular economy, emphasizing sustainability and environmental responsibility in product packaging.
