## Abstracts

Cellulosic passive fire protection coating is a type of fire retardant coating that is made from cellulose. Cellulose is a natural material that is found in plant cell walls. It is a non-toxic and biodegradable material. Cellulosic passive fire protection coatings are typically applied to steel and concrete structures. They work by creating a barrier that prevents heat from reaching the underlying structure. This barrier helps to protect the structure from fire damage and collapse. The cellulosic passive fire protection coating market is expected to grow significantly in the coming years. This growth is attributed to a number of factors, including:

- Increasing demand for fire safety:** The demand for fire safety is increasing rapidly due to the growing population and the increasing urbanization. Cellulosic passive fire protection coatings are an important part of fire safety plans for many buildings and structures.
- Rising adoption of sustainable building practices:** Sustainable building practices are becoming increasingly popular due to their environmental benefits. Cellulosic passive fire protection coatings are made from renewable resources and are biodegradable, which makes them an ideal choice for sustainable buildings.
- Government regulations promoting the use of cellulosic passive fire protection coatings:** Governments around the world are implementing regulations promoting the use of cellulosic passive fire protection coatings in certain applications. For example, the European Union has a regulation that requires the use of cellulosic passive fire protection coatings in steel structures.

Overall, the cellulosic passive fire protection coating market is a promising market with a lot of growth potential. The market is being driven by a number of factors, including the increasing demand for fire safety, the rising adoption of sustainable building practices, and government regulations promoting the use of cellulosic passive fire protection coatings.

The global Cellulosic Passive Fire Protection Coating market size was estimated at USD 714.0 million in 2025 and is projected to grow at a compound annual growth rate
