Abstracts

The ceramic diaphragm pipeline grinder is a professional grinding equipment. The ceramic diaphragm pipeline grinder is mainly driven by an electric motor, and the rotating gear (rotor) and the matching fixed gear (stator) are driven by a belt drive to rotate at a high speed relative to each other. The processed material is pressurized by its own weight or external pressure (which can be generated by a pump), generating a downward spiral impact force. When the material passes through the gap between the fixed and rotating teeth of the grinder (the gap is adjustable), it will be subjected to strong shear force, friction force, high-frequency vibration and other physical effects, thereby achieving effective emulsification, dispersion and crushing of the material, and achieving the effect of ultra-fine crushing and emulsification.

The global Ceramic Diaphragm Pipeline Grinding Machine market size was estimated at USD 85.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
