Report Overview

Cetyl Tranexamate Hydrochloride is a pharmaceutical compound that serves as an effective hemostatic agent. It is a derivative of the amino acid lysine, specifically the hydrochloride salt of tranexamic acid, which is an antifibrinolytic drug. This product is widely used in medical procedures to control bleeding by inhibiting the breakdown of fibrin, a protein essential for blood clot formation. Cetyl Tranexamate Hydrochloride is particularly beneficial in surgeries, dental procedures, and the management of various hemorrhagic conditions. It works by reversibly binding to plasminogen, the precursor to plasmin, which is an enzyme responsible for breaking down fibrin. By preventing this breakdown, the compound helps to maintain the integrity of blood clots and reduce bleeding. It is an essential component in the treatment of conditions where excessive bleeding is a concern, such as in the case of trauma, postoperative bleeding, or certain types of surgery.
