Report Overview

Cavity-free ball valves for the chemical, food, pharmaceutical and cosmetic industries. As there is no cavity between the ball and the housing, there is no residual and mixing of old products in the ball valve housing. A major advantage is therefore the trouble-free service, as the residual product does not crystallise, polymerise or otherwise interfere with the valve function. A further advantage is the similar torque, even at different temperatures. These valves are particularly suitable for sample and bottom outlet valves on mixing vessels.
