Abstracts

Cheese powder is essentially dehydrated cheese. It can be made a number of ways, but the most common commercial procedure is to melt fresh, whole cheese and spray it through a hot dryer, producing a thick, velvety powder that can then be added to popcorn, to breads and sauces, and, oddly enough, to homemade cheese recipes. Cheese powder is most commonly made from cheddar but can come in Swiss, sharp, and a few other varieties. It is not usually sold on supermarket shelves, but can be obtained through some online cheesemaking supply houses and spice or baking goods shops.

The global Cheese and Dairy Powders market size was estimated at USD 1445.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
