Abstracts

Chemical gas efficient etching system is a device used in microelectronics manufacturing, mainly for the production, processing, and etching of fine structures. It is one of the key process equipment in the field of integrated circuit manufacturing and nanomachining. The chemical gas efficient etching system uses chemical gas, plasma, and reaction control technology to etch and process the surface of materials. Its main principle is to generate high-energy particles in gas discharge plasma, and through the action of these particles, chemical reactions and physical etching are carried out on the material surface to form the required microstructure. The system usually consists of the following components: a reaction chamber: a sealed container containing an etching area, used to place material samples to be etched. The environmental control in the reaction chamber can ensure the stability and consistency of the etching process. Gas supply system: used to provide chemical gas mixtures required for etching, such as fluoride, chloride, etc. The gas supply system also includes gas purification and filtration devices to ensure the supply of high-purity gas. Plasma source: A device that generates plasma, usually using an RF or microwave power source. The plasma source generates high-energy particles for etching the material surface by ionizing the gas. Control system: Used to monitor and control parameters of the etching process, such as gas flow rate, pressure, power, etc. The control system can adjust parameters according to specific etching requirements to achieve the desired etching effect. Chemical gas efficient etching systems play an important role in microelectronic manufacturing, which can be used to manufacture semiconductor devices, integrated circuits, optical devices, sensors, and micro/nanostructures. Its high-precision and high-efficiency etching ability makes the preparation of fine structures more precise and controllable, meeting the demand for microelectronic devices in today's high-tech field.
