Abstracts

Chimeric Antigen Receptor (CAR) Cell Therapy is a type of immunotherapy that involves modifying a patient's own immune cells to recognize and attack cancer cells. The process begins by collecting the patient's T cells, a type of white blood cell, which are then genetically engineered to produce chimeric antigen receptors on their surface. These receptors enable the T cells to recognize specific proteins on the surface of cancer cells. Once the modified CAR T cells are infused back into the patient, they can target and destroy the cancer cells.

The global Chimeric Antigen Receptor Cell Therapy market size was estimated at USD 12500.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 22.50% during the forecast period.
